Mars Science News

MEPAG Meeting

The next meeting will be hosted by Jack Mustard, the MEPAG Chair, at Brown University in Providence, Rhode Island, USA. This meeting will focus on the Mars community inputs to the Planetary Science Decadal Survey.

MEPAG Site on Planetary Sciences Decadal Survey

The Mars Program Office has created a website to coordinate Mars community white paper inputs from the decadal survey: <http://mepag.jpl.nasa.gov/decadal/index.html>.

If you have a paper you are writing and would like to reach out to the community, please email your name and paper title to Charles.J.Budney@jpl.nasa.gov.

Decadal Survey website: <http://www7.nationalacademies.org/ssb/SSDecadal2011.html>.

Planetary Photogrammetry Guest Facility

NASA and the USGS have established a Planetary Photogrammetry Guest Facility at the USGS, Flagstaff. This is a specialized workstation used by the USGS for stereo topographic mapping of the Moon and planets. Up to 50% of the time will be available for qualified researchers to use to make products ranging from simple spot height measurements to fully edited digital topographic models (DTMs) from a wide variety of stereo images. USGS staff will provide training and supervision, but travel expenses are the responsibility of the selected investigator. To apply, send a short (1 page) informal application to rkirk@usgs.gov. The two key pieces of information required are the research goals (to allow us to evaluate whether images to achieve these goals are available) and the researcher's schedule of availability for group training and subsequent use of the facility. Applications received will be considered for FY 2010. For more information about the capabilities of the stereo workstation and the application process, see the 2009 LPSC abstract <http://www.lpi.usra.edu/meetings/lpsc2009/pdf/1414.pdf>.

	September 15-17, 2009 Moffett Field, California, USA	MARS DUST CYCLE WORKSHOP The Martian climate system is characterized in terms of the seasonal cycles of dust, water, and CO ₂ , which are coupled and driven by the general circulation. Recent workshops have focused on the water and CO ₂ cycles, but a workshop focused on the dust cycle, perhaps the most complex component of the climate system overall, has not been held since the post Viking data analysis programs of the 1980's. Given the enormous volume of data acquired since then, as well as the advances in modeling and laboratory methods, the time is right to hold a workshop focused on dust cycle. This workshop seeks to understand the global behavior of dust in the atmosphere by focusing on its lifting, transport, and deposition in the present climate regime. http://humbabe.arc.nasa.gov/MarsDustWorkshop/DustHome.html Convenor: Robert M. Haberle (NASA/Ames) Robert.M.Haberle@nasa.gov
